Mortuary Model

The SynDaver Mortuary Model features improved accuracy in injection access to major jugular, carotid, radial vein and artery, and venous and arterial femoral vessels. The six access sights come with replaceable inserts that can be easily swapped out for repeatability. SynTissue organs can be added—just ask your SynDaver sales representative for more details!

Included Components:

- Full genderless body with SynTissue skin and silicone muscles.
- Storage system included, but immersion tank purchase is highly recommended.
- Replaceable access points at the carotid/jugular, radial vein/ artery, and femoral vein/ artery.
- Injectable vasculature system for arterial embalming procedures.
- Compatible with cosmetic feature setting.
- Body cavity compatible with clinical embalming techniques.
- Limitless reusability with proper care and maintenance.
- Organs available as semi-standard request.

Affordable

SynDaver products are less expensive than cadavers over the course of their service life, and they may be repaired and upgraded indefinitely.

Long-Lasting

With proper care, SynDaver Mortuary Models will last indefinitely, providing decades of trouble-free use.

Humane

SynDaver Synthetic Humans are an ethical alternative to using live animals or animal cadavers for anatomy education.

Safe

SynDaver products are biohazard and formaldehyde-free, and they pose no health risk to those who handle them.

Effective

Since SynTissue® mimics live tissue (made from water, fibers and salts), it delivers realistic training without the dangers posed by cadavers.
