

SynAtomy Double Layer Bowel

160160

Our SynAtomy double layer bowel segments feature separate external muscular and internal mucosal layers and are designed for use in anastomosis training. Product is supplied as a single segment which may be reused many times.

This model employs simplified versions of our patented SynTissue brand synthetic human tissues. Designed with extensive input from our medical device, hospital and military clients, these materials exhibit realistic puncture resistance, suture holding, and electrocautery, laser scalpel, and plasma knife performance.

SynTissue brand synthetic human tissue components are designed on the basis of physical tests performed on actual living tissue. Each synthetic tissue is validated (tensile modulus, abrasion resistance, penetration force, coefficient of friction, thermal conductivity, dielectric constant, etc.) under the same physical conditions as the live tissue it is designed to simulate. The resulting synthetic tissue responds to stimulus much like real living tissue.

Relevant Skills: Manual and robotic-assisted anastomosis.

Equipment Compatibility: Laser scalpels, electrocautery and RF ablation devices, harmonic blades, monopolar and bipolar devices, plasma knives, ultrasound equipment and all known imaging equipment.

Included Components: One bowel segment.

Dimensions: 20mm x 15cm (OD x L)

Packaging: Product is shipped vacuum packed in a reusable container. Shelf life is guaranteed to be at least five years.

Available Options: If you require custom tissues, dimensions or modified mechanical properties please call and ask to speak to one of our technical sales representatives.

Extraordinary Features: SynTissue synthetic human tissues made from salt, water, and fiber—which feature the world's most realistic tactility. SynTissue synthetic human tissues match the acoustical characteristic of real human tissue.

All of our products are made in the USA.
